Professional Summary

Electronics and Telecommunication Engineering graduate and M.Sc. student at CUET with project and research experience in AI development. Built a Gemini-powered movie recommendation system and an XGBoost-based customer churn application using Python, REST APIs, and Streamlit. Research experience includes CLIP-based misinformation detection using image-text embeddings and model fine-tuning. Brings a strong problem-solving mindset, curiosity, and a willingness to learn and experiment with new technologies to solve practical problems.

Technical Skills

Languages: Python | SQL

ML and Deep Learning: PyTorch | Scikit-learn | XGBoost | Random Forest | SVM | CLIP

Classification | Regression | Transfer Learning | Feature Engineering | Model Evaluation | Hyperparameter Tuning

Generative AI and NLP: Google Gemini API | Sentence Transformers | FAISS

Data and Visualization: Pandas | NumPy | Matplotlib

Development and APIs: Streamlit | REST APIs | Requests | GitHub

Relevant Projects

CineMaya AI | Hybrid Movie Recommendation System

Python · Gemini API · Sentence Transformers · FAISS · TMDB API · Streamlit

- Developed a movie recommender combining LLM query enhancement, semantic search, and rating-based ranking.
- Integrated movie metadata through REST APIs; added adjustable ranking, caching, and API failure fallback.

GitHub: github.com/diptadaswork21-code/CineMaya-AI

Customer Churn Prediction AI Platform | 2026

Python · XGBoost · Streamlit · Feature Engineering · Model Evaluation

- Built a churn prediction workflow with automated preprocessing, feature analysis, and model evaluation.
- Created an interactive interface for risk prediction, visualization, and automated reporting.

GitHub: github.com/diptadaswork21-code/customer-churn-ai

Research Experience

Multimodal AI System for Misinformation Detection Using CLIP | 2025-2026

- Developed a CLIP-based detection system using image-text embeddings, preprocessing, fine-tuning, and evaluation.
- Conducted domain adaptation and cross-domain generalization experiments; documented methods and findings.

Industrial Experience

Brain Station 23 | Industrial Attachment in Machine Learning | 2025 (2 weeks)

- Worked on Python-based preprocessing, model development, and evaluation; gained exposure to ML pipelines and AI deployment.

Education

Chittagong University of Engineering and Technology (CUET)

M.Sc. (Engg.), Electronics and Telecommunication Engineering | 2026-Present

B.Sc. (Engg.), Electronics and Telecommunication Engineering | 2022-2026

CGPA: 3.49/4.00
